CROWNS OF LATIN AMERICA

*40	ARGENTINA-Provincias del Rio de la Plata	8 Reales	1813 J Elizondo 1, Craig 15. With the exception of a couple of extremely crude base metal issues in Mexico, this crown is the first struck by the Republicans. As the first professionally prepared crown of Independent Latin America, it is a very historical and important issue. Since it also happens to be unusually attractive, it has always been one of our favorite issues. It would seem that almost every collection of Republican Latin American coins should include this type as a symbol of the birth of non-colonial coinage. Nearly VF \$85; Extremely Fine, nice surface, some crudeness . .		185.00
*41	-Another	8 Reales	1813 J E1, C15. Almost UNC, fully lustrous, well struck and with no flaws. Superior in condition and attractiveness to the 1975 ANA auction specimen which realized \$625 and was later offered by Louis Collins for \$850.00		650.00
*42	-8 Reales	1813 J,	similar to the above but struck in copper in 1913 on the centennial of independence. AU-UNC, nearly full red		27.50

<u>BRAZIL</u> - We have acquired a nice collection of Brazilian coinage, 1695-1972. The crowns and minor silver coinage are listed separately herein on pages 13-18.				
109	CHILE	Peso 1818 FD E82, C86.	AVF, off center, <u>R</u>	80.00
110	-Peso	1833 I E95, C86.	Nearly EF, attractive, minor scratch.	175.00
*111	-Peso	1834 I E96, C86.	Approximately 5 pieces of this date are known without the Philippines counterstamp (it is possible that the entire mintage of this date was sent to the Philippines). In January 1976, at the Jess Peters Miami convention auction, a poorly struck F-VF specimen brought \$550.00 with three very advanced collectors competing for it after several dealers dropped out of the bidding at around \$400.00. The ultimate buyer obtained it several years after selling his large and well-known collection because he had never owned a specimen of this date and had always wanted one. This FINEST KNOWN (by at least 2 grades) piece is Nearly UNC, superbly Toned, flawless, well-struck and PROOFLIKE - One of those unusual coins that combines great RARITY and Superb Quality.

LATIN AMERICAN PAPER MONEY

Our long-promised (and hopefully long-awaited) list covering Latin American paper money is finally written. The photos of many of the notes will take at least two weeks to obtain from the photographer; thus we expect a release date of about November 15.

The list should be one of the most interesting fixed price lists ever presented covering this specialized field. Several rarities are offered along with numerous very scarce types. An idea of the magnitude of the offering can be gauged by recognizing that our cost for the group offered exceeds \$25,000.

Collectors of Latin American coins should be interested in at least studying this offering, thus all persons on our mailing list known to be interested in Latin American coins will receive a copy.

Other coin collectors who wish to receive the paper money catalogue must specifically request a copy in order to insure delivery.

THE CROWN COINAGE OF BRAZIL

THIS CATALOGUE PRESENTS a collection of Brazilian silver coinage spanning the colonial, empire and modern Republic periods. Many pieces in superb condition are included, as are several rarities. We hope that this small but impressive group will satisfy a little of the strong demand for these popular series.

Before commencing the listing, allow us to explain why we have decided to list the 640 Reis pieces within the crown section. Over the past years many cataloguers, including Wayte Raymond and Carlos Elizondo, have commented on the difficulty in determining whether the 640 Reis denomination is a crown or not. If diameter alone is used as the determining factor, modern coins over 36 mm are crowns. In fact, some smaller coins like the 34 mm Belgian Congo elephant 50 Francs of 1944 are numbered among the "classic crowns." All Brazil 640 Reis measure 36.5 mm to 38 millimeters. Yet they are still often omitted from references covering only Latin American crowns.

The cataloguing problem stems from the existence of both 960 Reis and 640 Reis concurrently from 1810-1833. It is "uncomfortable" to arrange a crown listing which includes both "large crowns" and "small crowns" of the same country for the time period. The easy solution is to ignore the "small" crown. However, by dropping reference to the 640 Reis of 1810-1833, the standard cataloguers also omitted listing the 640 Reis of 1695-1809. Over those 115 years the 640 Reis was indisputably the crown in the Brazilian silver coinage system.

Precedents exist for including more than one denomination from one country and era in the same crown reference. Several German states issued Speciesthalers, Reichstalers and Convention thalers concurrently. Their face values are considerably different and yet they have all been classically considered to be crowns. And then of course there is Brazil Elizondo Type 12 and Type 13, as well as Bahamas Elizondo Type 1 and Type 2.

In the final analysis we feel that the 640 Reis should be considered to be crowns and we will list them as such. We have also heard that the third edition of Elizondo will probably include them.

*323	<u>PEDRO II, King of Portugal</u>	640 Reis 1695, Vinicius 16. Large extended crown type issued only in early 1695 before the standard smaller crown style was produced. Noticeably different in appearance and catalogued in specialized Brazilian books as a separate one-year type. The <u>first crown</u> coin (38 mm) of Brazil. Nice F-VF, undervalued at	80.00
324	-640 Reis 1695 V41	Second type with smaller, more compact crown. F-VF	37.50
325	-640 Reis 1696 V44.	Attractive AVF	42.50
